BANGLADESH
ANNUAL REPORT
HIGHLIGHTS
2021
2022
The year 2021/22 has been an exciting one for WaterAid, as we continued to beam our mission to reach more communities with water, toilets, and taps. We have once again seen that the courage and collaboration between partners and communities can bring transformational changes.

Bangladesh continued to demonstrate its progressive nature. Our celebration of the iconic 50 years of WASH journey is a testament for it and helps set a pathway of achieving universal WASH in the future. The year has been significant for WaterAid as we mobilised to bring water as a vital agenda at COP26 - sharing Bangladesh’s plight as a result of surging climate events which affect WASH infrastructures and make lives difficult for the marginalised. While accentuating on the need for focused finances on essential resilient infrastructures and nature-based solutions towards adaptation.

We are resolute towards tackling challenges of WASH, emerging from unplanned urban growth pockets hindering the SDG 6 progress with innovative applications such as rainwater harvesting, CWIS approaches and better FSM uptake. Our effort and engagement on public-private partnership paved the way towards reducing groundwater use, equitable WASH access, and supporting development of the critical strategies remained a major focus in 2021/22. The impact we have collectively achieved this year is only through the generous support of our donors, supporters, the government, our partners, and the communities we serve.

Finally, I wish to share 2021/22 is the final year of our current country programme strategy (CPS) 2016-2022. In the coming year, we aspire to develop the CPS 2023-2028 based on our learnings from our past legacies and emerging needs of our communities.

Hasin Jahan

Note from Country Director

About us

WaterAid is an international charity focused on helping people break free from poverty and change their lives for good through ensuring access to clean water, decent toilets and good hygiene.

We change millions of lives every year, with our global footprint spanning 27 countries.

WaterAid Bangladesh

WaterAid Bangladesh was established in 1986 and has since been working with Bangladeshi communities to help them demand their rights for water, sanitation, and hygiene (WASH), and support the government and other duty bearers to respond to citizens’ needs. We work with communities to design local and context-appropriate solutions, and implement them together.

WaterAid Bangladesh works through partner NGOs and also collaborate with several strategic partners to amplify our voice so that our message can be heard, and impact can be sustained and scaled.

Decades of WASH service delivery and influencing for rights

Our area of focus is crosscutting - ranging from hard-to-reach, salinity and disaster-prone areas in Southern Bangladesh to urban slums, industrial districts and small towns. Our work reaches a diverse range of people and institutions in different contexts. In this fiscal year, we have covered 15 districts, 27 sub-districts, 6 city corporations, and 4 municipalities.

04 Municipalities

WaterAid/ Tapash Paul
Minara has been working at Fakir Fashion for 11 years and also the very first woman supervisor in her section. Minara, who will go for pregnancy leave soon, emphasised how training sessions on hygiene and WASH facilities by WaterAid and local partners helped pregnant employees like her.

Our mission in Bangladesh comprise of four key thematic programme areas.

**Urban WASH**
Focus on city and municipality-wide approach to WASH service improvement.

**Rural WASH**
Works to improve WASH services in households, healthcare facilities, and schools in remote regions.

**Climate Resilience**
Works in climate-vulnerable regions with context-appropriate WASH technologies and coping strategies.

**Influencing & Enabling**
Strengthens WASH policies to steward national WASH agenda and advocate for WASH rights.

Geographic presence
Our work spans throughout Bangladesh with activities in districts of Dhaka, Bagerhat, Chattogram, Gaibandha, Gazipur, Khuña, Manikganj, Meherpur, Moulovibazar, Narayanganj, Nilphamari, Rajshahi, Satkhira, Sunamganj, and Tangail.

Abdullah, Nur, and Amina playing in the Sattar Mollah Slum in Dhaka where WaterAid deployed both hygiene promotion interventions and established WASH blocks to keep the community safe from diseases and improve health and wellbeing.
Urban WASH
Optimising public service delivery and ensuring WASH accessibility for vulnerable and marginalised communities are the crux of our Urban WASH programme in Bangladesh. We spearhead activities to promote pro-poor WASH outcomes through flagship projects, impactful partnerships, public toilets, and WASH in industries.

Highlights
1. Activated WASH as schools reopened after a long hiatus - supporting 173 schools encompassing 124,685 students with safe drinking water, handwashing provisions, inclusive toilets, menstrual facilities, and awareness messaging.
2. Supported Saiyed and Shakhriar municipal authorities to finalise ‘By-Laws on waste management.
3. 50,650 patients, doctors, and attendants reached with improved WASH in healthcare facilities.
4. Partnered with Bangladesh Railway to energise their WASH imperatives - resulting in the development and inauguration of the Dhaka Railway Station’s public toilet.
5. Collaborated with Dhaka WASA in awarding ideal payment of water bills to recognise responsible citizenship.

WASH in industries
The focus for Industrial WASH is in areas where apparel factories are based as well as their respective workers’ communities. Worker communities are often WASH-vulnerable - lacking appropriate waterpoints, decent toilets, or not adhering to hygiene practices that can lead to negative health outcomes.

Highlights
1. 145 handwashing stations and ancillary WASH infrastructures setup to improve access to WASH in RMG worker communities.
2. Four RMG-textile factories in Narayanganj district have rainwater harvesting system installed - having a collective capacity to save 30,000 cubic meters of water per annum.
3. Partnered with seven ready-made garment factories to reach 32,000 workers with hygiene awareness in factories inclusive of MHM and gender-centric activations.

341,255 people reached with different WASH services in the industrial WASH inclusive of COVID response portfolio

103,000 people can now practice good hand hygiene as a result of the 145 handwashing stations installed in worker communities

Partnering with BGMEA to accelerate adoption of industrial rainwater harvesting
Garments export industry is a major contributor to the Bangladesh’s GDP. However, industries are resource intensive - putting significant pressure on groundwater and affect surface water quality. WaterAid and the Bangladesh Garments Manufacturer and Exporter Association (BGMEA) joined forces to bring water as a central issue of discussion for factories with aims to prioritise water efficiency, promote environment-friendly models such as rainwater harvesting, and setting up a sustainable water management cell to improve sustainability of factories.
Rural and small town WASH

Rural and small town WASH works to increase inclusive and resilient WASH access of the poor at hard-to-reach areas. Key focus areas include empowering local government institutions especially municipalities for faecal sludge and solid waste management along with enhancing capacity of community members, service providers, and institutions to promote sustainable WASH services.

27 youth volunteers comprising of adolescent girls who promote WASH and MHM at tea garden colonies

Enhanced resilience of flood vulnerable at remote ‘char’ areas through resilient-WASH structures

WASH in Madrasa

Madrasas’ are Islamic religious schools which supports around 13 million students. Madrasas’ at remote regions are often observed with limited WASH infrastructure. WaterAid is working to establish a model WASH programming for this parallel education system - developing evidence for replication by the Government across all Madrasas’.

Invested on FSM

The programme is deeply invested in creating the model for faecal sludge management (FSM) to address second generation sanitation challenges and curate a complete sanitation value chain. The Saidpur faecal sludge treatment plant was developed to do just that, a critical infrastructure to institutionalise FSM. In 2021, the plant was visited by the Ambassador from the Embassy of Sweden, along with overseeing our WASH interventions in schools.

Innovation: Low-cost, coin-operated sanitary pad vending machine

We operationalised two coin-operated vending machines in schools that students can use to access on-demand sanitary pads during menstrual periods. The electric vending machine we have deployed throughout our project area relies on power - an inconsistent resource in the grassroots. This machine bypasses the need for electricity and is fit-for-context.

Climate Resilience

Climate resilience programme supports climate change-affected communities with resilient WASH interventions - especially in the coastal belts and northern arid regions of Bangladesh. These facilities not only remain functional amidst disasters but also accelerate the process of overcoming its setbacks. The programme also provides livelihood support, health services and capacity building initiatives to strengthen adaptability of communities.

Representation at COP26 and climate campaigning

We took part in COP26 to call governments to recognise WASH as an integral factor to make communities resilient to climate shocks. Climate impact regularly pushes vulnerable communities to the brink and affects essential water resources - something we portrayed through mobilising a big-ticket communication campaign showcasing the grim reality of climate events at the coastal belt and north-eastern Bangladesh.

COP26 outcomes

Relevant outcomes from COP26 were the signing of the Glasgow Climate Pact, agreeing the Paris Rulebook, and launching of the Resilient Water Accelerator (RWA). The RWA enables financing mechanisms and aims to ensure water security to 50 million people in water-stressed areas with sustainable water sources by 2030.
Influencing & Enabling

The programme works to influence government policies, strategies and plans, support sector strengthening and coordination, and work on key themes such as SDG 6, WASH financing, and pro-poor, inclusive and functional WASH. We do this through showcasing evidence, and building awareness of CSOs, NGOs and networks, and relevant ministries.

Highlights

Finalisation of the National Strategy for Water Supply and Sanitation 2021

The strategy was championed by Local Government Division (LGD) with WaterAid serving as the member secretary of the working committee - providing technical leadership. The strategy is divided into three thematic sub-sections that entail WASH coverage and service quality, perennial and emerging WASH challenges, and strengthening sector governance, coordination, monitoring, and reporting.

Our influencing efforts through the MHM platform led to a VAT/Tax exemption on MHM materials in the national budget of FY21-22

The exemption applied to the total local manufacturing stage of sanitary napkin production, which was previously applied to only imported materials or factories with large production capacity.

Contributing to different national policies and strategies

WaterAid is contributing to update, revise, and develop the National Hygiene Promotion Strategy, National Policy for Public Toilet Construction, Operations and Maintenance, National Water Supply and Sanitation Operations and Maintenance Guidelines, and National Strategy for Managed Aquifer Recharge. Finalised drafts of these policies, strategies, and guidelines are presently awaiting approval and rollout.

National budget of FY21-22 allocated BDT 119.55 billion for WASH

WaterAid, with partners and collaborators, organised both pre- and post-budget press conferences online - highlighting WASH gaps, inequalities and pandemic priorities in existing allocation, which translated to this outcome.

Featured nature-based solution

Co-composting

Our very first faecal sludge treatment plant (FSTP) is operational since 2016 and treating faecal sludge and solid waste to produce co-compost used as a soil conditioner by farmers. Faecal sludge is collected from opted households through municipality-owned vacutugs. A single composting cycle from collection to packaging takes an average of 60 days. FSTP at Sakhipur recovers around 50% of its operational cost from faecal sludge and solid waste collection, and compost sales.

FSTPs also function to reduce greenhouse gas emissions by handling the wastes safely and from a sustainability point of view, the plants contribute to the government’s emission reduction targets. Studies found that per ton waste recycling results in 0.28 ton CO₂ reduction, 0.44 kL water savings, 0.61 ton reduction in safe handling of organic wastes, and 0.05 GJ lower heat value energy savings.

We wouldn’t be able to do what we do without the support of our donors and partners, and the communities we serve

National Strategy for Water Supply and Sanitation which was pending update and was finalised in 2021 - enabled through the leadership of the Local Government Division and their openness to WaterAid’s recommendation.

This was organised as part of the national celebration of the birth centenary of the Father of the Nation, Bangabandhu Sheikh Mujibur Rahman, and the golden jubilee of Bangladesh’s independence.
