

Clean Water for All

Can you imagine a world where you turned on a tap and nothing came out?

- ❑ We are very lucky to have clean water whenever we need it
- ❑ Some people in the world have to walk 3 or more hours to collect their drinking water
- ❑ In fact, each of us uses around 150 litres a day for our health and hygiene, compared to only 9 litres in other parts of the world

The truth is, despite water seeming to be everywhere, it is becoming harder for people to get in many parts of the world.

Climate change means that rainfall and water sources are becoming increasingly unreliable.

Board Game:

This game will help you to understand what it is like for people in an area where water is hard to get.

In this case, you'll need to carry a jerry can to collect water from the well. You will find various things along the way that make your life more difficult. This is the everyday reality for some people in the world.

You will need:

- 1 dice
- A counter for each player (up to 4 players)
- Printout of the game board

How to play:

- 1 Each player rolls the dice once - the highest score goes first.
Take turns to roll and move.
- 2 If you land on a square with instructions, you must follow them (these can be good or bad events!)
- 3 The winner is the first player to reach the end of the journey.

If you want to find out more about clean water for all, visit your local water company's website: <https://www.wateraid.org/uk/meet-our-water-industry-partners>

Print and cut out these counters for each player to use! Or use your own if you have any in class.
